

# At-Risk and Lone Worker Safety Solution

## Aware360: SafetyAware

Improve safety, enhance productivity and reduce risk for lone and at-risk workers

One in five workers in North America is considered a lone worker. Employees in a wide variety of fields — including social services, energy, and construction — are required to work alone or in dangerous environments, putting them at a high risk for injury, illness, and fatality.

SafetyAware provides instant communication and robust response that supports lone workers whenever, wherever they are. At the same time, SafetyAware keeps teams productive by automating manual processes, letting supervisors broadcast messages and providing data that can help improve business processes. SafetyAware meets legal obligations for duty of care while going beyond the basics – to save lives as well as improve your bottom line.

# Aware360: SafetyAware

Improve safety, enhance productivity and reduce risk for lone and at-risk workers

## How SafetyAware Works

### Workers with Edge Devices:

Connect workers with the SafetyAware App, wearables, satellite devices and more to send check-ins and alerts.

### Control Center:

Real time data is analyzed in the cloud-based Control Center platform. Exception-based alerts are prioritized for action.

### Real Time Response Center:

24/7 live monitoring of alerts and status indicators. Monitors action alerts in real time based on your configurable escalation plan.

## Key Solution Benefits

- ✓ Send rapid SOS alerts for emergencies and receive help from trained professionals
- ✓ Leverage a variety of devices to suite your worker's unique environments
- ✓ Proactively check-in with monitors to ensure worker safety
- ✓ Reduce corporate liability and perform audits on critical event history
- ✓ Enhance safety with man-down and no motion alerts
- ✓ Automate manual processes and gain insightful data
- ✓ Comply with regulations and prove Duty of Care
